Powering Through Down Markets for Better Investor Results

T. Rowe Price U.S. equity funds have helped investors save money during even the worst market downturns of the past 25 years.

April 2025

Market downturns happen. If you've been investing for a while, you've probably experienced more than one. And if you are like most investors, you have lost money and found yourself waiting years for your investments to reach their previous levels.

T. Rowe Price U.S. equity funds have succeeded in dulling this financial pain for many investors, nearly always generating better returns than their respective benchmarks through down periods since 1995.

We've achieved this strong performance through our active management approach, led by investment professionals who go after returns that are better than the index. We go beyond the numbers, applying rigorous research and prudent

risk management to pursue more money for investors during bull markets, while trying to help investors come out strong on the other side of market downturns. History shows we've done just that with our U.S. equity funds.

Higher returns through down markets time and time again

Our U.S. equity funds have done well to beat indexes in both up and down markets. But their performance has especially stood out during prolonged periods when markets were down overall.

T. Rowe Price examined the performance of 18 U.S. equity funds between 1995 and 2024, specifically looking at five-year monthly rolling periods during that time.

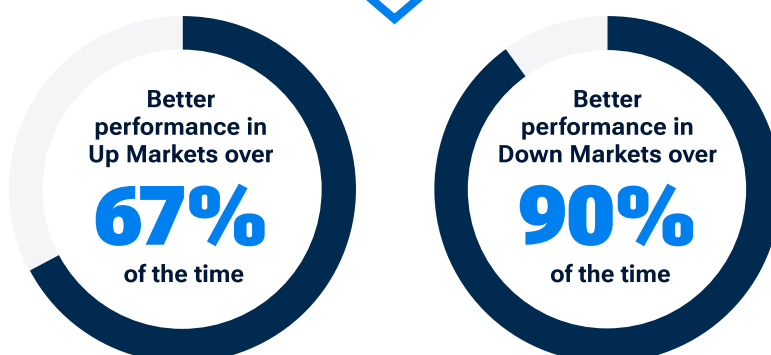

In those periods where benchmarks were positive, our U.S. equity funds performed better in over 67% of cases. On the flip side, our funds performed better in over 90% of the periods when benchmarks showed negative returns.

“ Our U.S. equity fund performance has stood out during prolonged periods when markets were down overall.

Proven performance across all markets

Analysis of 18 T. Rowe Price U.S. equity funds during 5-year monthly rolling periods from 12/31/1995 to 12/31/2024.

Past performance is no guarantee of future results.

“ T. Rowe Price U.S. equity funds generated more money than a blended index of relevant benchmarks in five-year periods surrounding the tech sector collapse and the global financial crisis.²

Down markets can hurt in the short term. But their effects can be felt for years because the larger the market drop, the more money you'll need to get back to previous levels. (Consider, for example, that a 10% loss will require an 11.1% gain to break even, but a **50% loss will require a 100% gain.**) That's why it helps to try and limit losses during down markets by partnering with an investment manager with a history of success. T. Rowe Price investment professionals have managed portfolios through multiple market cycles and understand how to navigate through difficult periods. They know from experience that every dollar you can save during a market downturn is a dollar you can invest later, potentially resulting in more money for you over time.

Helping investors emerge strong from the worst downturns

Fortunately for investors, down markets historically have been less frequent and shorter in length than periods where markets have done well. But these drops, when they happen, can have a deep and long-lasting impact on investors' portfolios. Consider two real-life examples of prolonged downturns in the past 25 years: the collapse

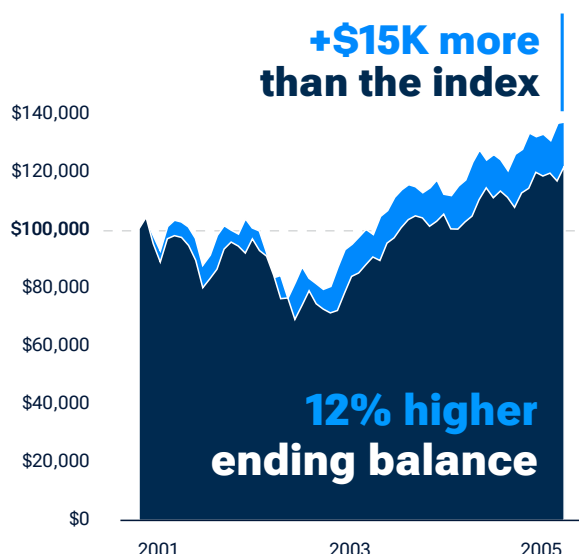

of the tech sector in 2001 and the 2008–2009 global financial crisis.

During these two high-profile events, markets experienced double-digit negative returns, and many investors waited years to see their portfolios return to previous levels. Investors close to retirement felt the worst of the pain. But in five-year periods surrounding these events (2001 through 2005 and 2008 through 2012), T. Rowe Price U.S. equity funds were shown to have generated more money than a blended index of relevant benchmarks. This means that investors potentially saw meaningfully higher balances once markets recovered.

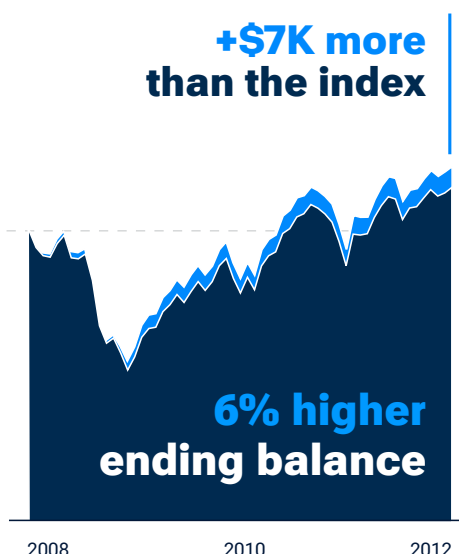

Down markets are inevitable, and it's likely that you will experience periods of negative investment returns. But T. Rowe Price U.S. equity funds have reliably beaten their respective benchmarks through longer down markets and recovery periods of the last 25 years, helping to produce better results in the long run. That's the power of the T. Rowe Price active management investing approach—deep experience, prudent risk management, and rigorous research in pursuit of the right opportunities for your long-term goals.

We helped our clients power through historic market downturns—and they came out ahead²

¹ Results based on an analysis of T. Rowe Price's active, diversified U.S. equity mutual funds (oldest share class). Index, sector, specialized, and institutional clones of our retail funds were excluded. Of T. Rowe Price's 25 diversified U.S. equity funds, 18 met the criteria for the analysis and are represented within. One of the 18 funds, the Capital Appreciation Fund, also has the ability to invest in fixed income assets but is primarily an equity portfolio and benchmarked to the S&P 500 Index. The funds included in the analysis represented over 75% of total U.S. equity assets in the domestic and global equity mutual funds advised by the firm as of 12/31/24. Results for other time periods will differ.

² Results for other time periods will differ. Results based on an analysis of T. Rowe Price's current active, diversified U.S. equity mutual funds (oldest share class). Index, sector, specialized, and institutional clones of our retail funds were excluded. Of T. Rowe Price's 25 current diversified U.S. equity funds, 17 met the criteria for the analysis and are represented within. One of the 17 funds, the Capital Appreciation Fund, also has the ability to invest in fixed income assets but is primarily an equity portfolio and benchmarked to the S&P 500 Index. The funds included in the analysis represented over 75% of total U.S. equity assets in the domestic and global equity mutual funds advised by the firm as of 12/31/24. The analysis spans two 5-year periods surrounding significant market corrections and recovery (2001 through 2005 and 2008 through 2012) and measures performance net of fees and trading costs. Fund performance was measured against a custom blended index allocated according to the designated benchmarks of each fund included in the analysis. Compares an initial \$100,000 investment in this custom blended index with a similar investment equally weighted across the T. Rowe Price funds available at the beginning of the analysis and expanding to include new diversified U.S. equity funds as they inception (14 of 17 have track records allowing inclusion at the beginning of the first 5-year period, and all 17 are included throughout the second). Both the funds and indices are rebalanced monthly to reinstitute an equal weighting of each fund and index at each interval throughout the analysis period. Assumes dividends and capital gains are reinvested and no additional contributions.

All investments are subject to risk, including the possible loss of principal. Small-cap and mid-cap stocks are generally more volatile than stocks of large, well-established companies. All charts and tables are shown for illustrative purposes only.
